

# Retrievable Packers

## AS1-XW Retrievable Production Packer

The AS1-XW Packer is a full opening, retrievable production packer that performs like a permanent packer without the expense of seal units. Run with an on/off tool the AS1-XW can be set on wireline and retrieved on tubing. Unlike other wireline set retrievable packers that require seal units and a separate retrieving tool, the AS1-XW can be pulled from the well without extra tubing runs. Once the packer has been retrieved it can be redressed and run again on wireline or tubing. The AS1-XW is one of the most economical wireline set retrievable packers on the market today.

### Product Features

- Packer can be set on wireline or tubing
- No need for expensive seal units
- Packer can be run under pressure with plugging device
- Bypass opens before slips are released
