

Seal Bore Packers

BH & DBH Seal Bore Packers

The BH Seal Bore Packer is a hydraulic set version of the standard type D Seal Bore Packer. The packer is run to setting depth on the tubing string and set with tubing pressure making it ideal for deviated holes or wells with doglegs. The DBH Seal Bore Packer is the same as the addition of a large upper seal bore to allow the largest possible ID through the seals and packer.

Product Features

- One trip setting
- Metal back-up system expands to casing ID to prevent rubber extrusion
- Top connection interchangeable to accept competitive seals
- Parts keyed for easy mill-out
- Elastomer options for high temperatures, H2S and CO2 applications

Specifications

Casing Size	WT.	Model	O.D. of Tool	Nominal Casing I.D. Range		Packer Bore	Min. Bore Through Seals
				Min.	Max.		
5-1/2"	13.0 - 23.0	DBH	4.438	4.670	5.044	2.688/1.938	1.938
